

Test areas

Startup:

- Fresh install of Sakai, Profile2 (P2) starts up ok and database tables created.

General:

- Navigate to P2 with new user, check main shows up with info from Account (name and email)
- Check all pages along the top render ok when links clicked
- Click edit in panels, enter some values, save, navigate away and come back, verify info saved.
- Change values in privacy page, click Save, navigate away and come back, verify new settings.
- Change values in preferences page, click Save, navigate away and come back, verify new settings.
- Add a status update, check saved.
- Clear status update, verify removed.
- Add a profile image, verify it works.

LDAP integration:

- For an internal user, check changing email address in P2 also updates Account.
- For an external user, changing email address in P2 should be disabled.

Twitter integration:

- Add twitter details to Preferences page in P2
- Add status update, check sent to twitter (Note: clearing a status update will not clear it from Twitter)

sakai.properties:

The following are the defaults and are documented. Changing any of these should have the desired effect in P2

```
# Upload limit for profile pictures, in MB
profile2.picture.max=2
```

```
# Convert images from old profile to new?
profile2.convert=false
```

```
# Allow users to post status updates to Twitter? (true/false, default true)
profile2.integration.twitter.enabled=true
```

```
# Where Twitter status updates will appear to come from
# This needs to be configured with Twitter so this value can't just be changed to any value
# See the 'Settings' section of http://confluence.sakaiproject.org/display/PROFILE/Profile2
profile2.integration.twitter.source=Profile2
```

```
# Allow users to change their profile picture? (true/false, default true)
profile2.picture.change.enabled=true
```

Can users upload an image or just link to an existing one? (upload/url, default upload)
profile2.picture.type=upload

Available as of version 1.2:

Allow users to change their privacy settings? (true/false, default true)
profile2.privacy.change.enabled=true

Override the default privacy settings with these options (0=everyone, 1=only connections, 2=only me)

This will set the defaults for a person with no existing privacy record

or when the privacy settings are locked (change.enabled=false)

Key: 0=everyone, 1=only connections, 2=only me

If not specified, all properties below default to 0, which is everyone

Also note not all properties have the full range (0,1,2). Each is documented underneath the property itself.

profile2.privacy.default.profileImage=0

0,1 only

profile2.privacy.default.basicInfo=0

0,1,2

profile2.privacy.default.contactInfo=0

0,1,2

profile2.privacy.default.academicInfo=0

0,1,2

profile2.privacy.default.personalInfo=0

0,1,2

profile2.privacy.default.birthYear=true

true/false

profile2.privacy.default.search=0

0,1 only

profile2.privacy.default.myFriends=0

0,1,2

profile2.privacy.default.myStatus=0

0,1 only

Available as of version 1.3:

List of userIds (not eids) that will never show in searches or friends lists (comma separated no spaces, default=postmaster)

profile2.invisible.users = postmaster

Set this to tell the ProfileManager to get it's data from Profile2.

If left unset, any tools that use the ProfileManager from the original profile tool (ie Roster)

will continue to use the data from org.sakaiproject.api.app.profile.LegacyProfileManager.

So you must set this to enable the integrations.

If you are using a version of Sakai prior to 2.7, you need to apply the patch attached to

<http://jira.sakaiproject.org/browse/SAK-17573>

in order for this property to have any effect

profile.manager.integration.bean=org.sakaiproject.profile2.legacy.ProfileManager

Available as of version 1.4:

profile2.privacy.default.businessInfo=0

0,1 only

profile2.privacy.default.myPictures=0

0,1 only

profile2.privacy.default.messages=0

0,1 only

Enable/disable the gallery feature? (true/false, default true)

profile2.gallery.enabled=true

Privacy settings:

- Change your privacy settings to only show certain info to 'connections'. As a different user that is not connected to the first user, find that user in a search. Click their profile and verify you cannot see the information they chose to hide.
- Add that user as a connection and as the other user, confirm the connection. Again as the second user, verify you can now see that information.

Preference settings:

- Change your email preferences and confirm it has the desired effect, ie you should not receive emails when someone adds you as a connection, and vice versa.

Connections:

- Perform a search and add someone as a connection.
- As the other user, confirm that connection. Verify confirmed in connection list.
- As the first user, remove that connection, verify removed.
- Add that person as a connection again (userB), as userB confirm it, and as the administrator, delete the account of userB. Verify connection has disappeared from userA's list.
